

# **FOR DOCTORS**

All OPG images are provided on 8" × 10" radiographic plates at 1:1 ratio with the actual image acquired. Plates are handed over to patients, if desired. Reports typically take about 6-12 hrs for OPG and 12-24 hrs for CBCT (depending upon the complicity and volume of scan). The soft copies of both the image and the report are sent to the referring doctor.

CBCT scans are done for a wide range of volume starting from 5cm×5cm (covering 1-4 teeth) to 17cm×13.5cm (covering the whole maxillofacial region with all PNS and TMJ) in a single exposure. The scan reports are provided with multiple radiographic plates, CD with the raw DICOM data (including in-built viewer software), 3D image color prints and a detailed report.

Personal, one-on-one sessions are arranged by Dr. Shaon Mukherjee (CEO and Chief Oral & Maxillofacial Radiologist) for case discussion or any other assistance needed. Please feel free to call at 033-2422-8070 or 08420018192 for any help required.
